HOW AMONEYWEB WORKS

MULTILINGUAL INTERFACE:italian, english, german.

MAILING SERVICE NOTIFICATIONS OF MEANINGFUL EVENTS (transactions' approval or denial, ect.)

MAIL

BANCA 01/1/22

BACK OFFICE ENVIRONMENTsimple and intuitive.

MOBILE PAYMENT:The virtual store can memorize a customer's credit card's Pan in a safe environment, to then reuse it during subsequent payments based on the customer's login info (e.g. User / Password) without requiring the re-entering of the card's pin number.

AMONEYWEB

EFFORTLESS INTEGRATION:The interface specifications allow for an effortless and quick integration into the AmoneyWEB interface.

AmoneyWEB is a payment gateway (or portal): its main functionality is to manage payments carried out by users on e-commerce websites.

Whenever a customer selects a product to purchase and then proceeds to the checkout page, he will be redirected to Argentea's secure sever. He will then insert his secure credit card information, which will be sent back to the store upon the successful completion of the transaction, redirecting the user to the store's web-site(the whole operation lasts but few seconds). Simultaneously, the deposit request is forwarded to the store-selected banking circuits.

Amoney Web is based on an extremely evolved anti-fraud system, available 24 hours a day to its customers and allows direct interaction with the credit cards' providers: it was designed to offer the highest possible customization potential and use functionality.
